claim 5, at bottom of page 21, since the preamble is repeated in the replacement pages.

For the two additional independent claims, the SMALL ENTITY fee is $2 \times \$40$, or \$80.00. Attached is a check in the amount of \$80 for the additional claims.

Applicant solicits allowance of the claims.

Respectfully submitted,

DAVID NEWMAN, CHARTERED

ibuted network, spread-spectrum system Center 2600 comprisi

a central office for sending a plurality of packets over the distributed network;

a hub node for receiving the plurality of packets from the central office, and for sending the plurality of packets with spread-spectrum modulation over the distributed network;

a plurality of nodes for relaying the plurality of packets with spread-spectrum modulation; and

a remote station for receiving the plurality of packets relayed by the plurality of nodes.

A distributed network, spread-spectrum system, comprising:

a first remote station for transmitting, using spreadspectrum modulation, a plurality of packets to a first node;

a first node for relaying the plurality of packets with spread-spectrum modulation;

a second node for receiving the relayed plurality of packets, and for transmitting, using spread-spectrum modulation, the plurality of packets; and

a second remote station for receiving the plurality of packets transmitted from the second node.

7. A distributed network, spread-spectrum method,

comprising the steps of:

sending, from a central office, a plurality of packets over the distributed network;

receiving, at a hub node, the plurality of packets from the central office;

sending, from the hub, the plurality of packets with spread-spectrum modulation over the distributed network;

relaying, with a plurality of nodes, the plurality of packets with spread-spectrum modulation; and

receiving, at a remote station, the plurality of packets relayed by the plurality of nodes.

8. A distributed network, spread-spectrum method, comprising the steps of:

transmitting, from a first remote station, using spread-spectrum modulation, a plurality of packets to a first node;

relaying, with a first, relaying the plurality of packets with spread-spectrum modulation;

relaying, with a second node, the relayed plurality of packets;

transmitting, with the second node, using spreadspectrum modulation, the plurality of packets; and

receiving, at a second remote station, the plurality of packets transmitted from the second node.
